

## 5<sup>th</sup> ANSA & μETA International Conference retrospective

From June 5<sup>th</sup> to June 7<sup>th</sup> 2013, the CAE world experienced three days full of innovative ideas, success stories, interaction between the industry and the software developers, and inspiration.

During the 5<sup>th</sup> ANSA & μETA International conference, organized by BETA CAE Systems S.A. at the MET hotel, in Thessaloniki, Greece, CAE (Computer Aided Engineering) experts from a number of industries showcased their success stories using the software products of BETA CAE Systems S.A. The event offered the opportunity to presenters and guests to explore a widely differentiated portfolio of applications of our software products and demonstrated how state-of-the-art engineering progress, with vision and determination, and with more effective product development tools and methodologies can contribute to the success.

More than 135 guests from 58 companies, coming from 21 different countries, joined the engineering personnel of BETA CAE Systems S.A. to share their work, pass their experience, exchange their thoughts, and promote their requirements.

Focused on numerous disciplines and industries, around 55 contributed presentations, which kept the attention of the audience unabated, composed the main body of the event. Arranging the presentations according to subject relevance, allowed the attendees with similar interest to get to know each other and discuss different approaches and applications of ANSA and μETA in their field of interest.

The presentations of the key note speakers Josef Fuerfanger (BMW Group), Frank Sautter (Dr. Ing. h.c. Porsche AG), and Toshihiro Araki (Nissan Motor Co.), who all have prominent positions and outstanding achievements in the CAE field, were a highlight as they shared advanced applications of ANSA and μETA in their organizations.

The programme also included additional presentations on the latest developments on ANSA & μETA, highlights of the future developments, and demonstrations of the newest product of BETA CAE Systems, the SPDRM (Simulation, Process, Data & Resources Management).

The technical gallery (showroom) –organized in different application areas and disciplines offered the unique opportunity to the participants to interact with both our support and development engineers and discuss on current practices and also on requests for future developments.

As happened in our previous two events, the interaction among the participants remained intense during the offered meals and especially during the social event themed as “Greek night”.

BETA CAE Systems S.A. thanks you all and congratulates the participants for their contribution to the success of the event. We are looking forward to hosting you again during one of our following events.
