

Release Announcement for beta_lm_tools v6.x June 17, 2008

BETA CAE Systems S.A.

announces the release of **beta_lm_tools v6.x**

Compatibility issues:

All ANSA and mETA POST versions starting from ANSA_v12.1.5 and META_v6.2.0 will require the presence of beta_lm_tools v6.x.

Earlier versions of beta_lm_tools will not be able to serve any client request for future versions of BETA CAE Systems S.A. products.

Compatibility with earlier beta_lm versions:

It is quite possible that the server host keys reported by earlier beta_lm versions and the server host keys derived by the new beta_lm version are different.

Check if the host keys generated by v6.0 match the host keys written inside the license.dat file that is currently in use.

If the keys are not the same, contact BETA CAE Systems S.A. for assistance.

Server Host Keys in WINDOWS platforms:

New option allows the explicit selection of a USB or WiFi network interface in order to produce a valid server host key. By default, beta_lm targets the Ethernet card.

beta_lm_tools on Virtual Machine:

Installation of beta_lm_tools in any type of Virtual Machine is prohibited.

Licensed application on Virtual Machine:

The launching of ANSA or META POST from within any type of Virtual Machine will disable the "sharing" of credits for this application.

It is strongly suggested to **update to the latest beta_lm_tools version** as soon as possible in order to ensure a seamless migration to new versions of BETA CAE Systems S.A. products.

For details, please refer to the available **Release Notes**.

An updated **Set Up Guide** document is available with the new beta_lm_tools downloads.
