
New license manager version release announcement

October 1, 2010

BETA CAE Systems S.A. announces the release of BETA LM Tools v6.3 with important code corrections

BETA CAE Systems S.A. announces the release of a new version of its license management tools, beta_lm_tools v6.3. This first point release resolves the following known issues.

Known issues resolved

Redundant servers scheme issue related to "master" and "slave" communication loss

A loss in communication between "master" and "slave" servers had been noticed in certain cases, mainly on 64bit platforms.

As a result, beta_lm communication was interrupted and ANSA or mETA was down.

From beta_lm_v6.3 and on, the communication between the servers of the redundant scheme has become more robust and miscommunication is eliminated.

beta_lm_kill_user issue

beta_lm_kill_user command was not working as expected in certain platforms. These issues are now resolved and beta_lm_kill_user command is working properly, on all platforms.

Download

Customers, who are served directly by BETA CAE Systems SA., may download the new software, examples and documentation from their account in our server. They can access their account through the user login link at our web site <http://www.beta-cae.gr>

Contact us if you miss your account details. The [Public] link will give you access to the public downloads area.

Customers who are served by a local business agent should contact the local support channel for software distribution details.
