

BETA CAE Systems visits GAC Research Institute for technical insights

China, July 4, 2024

BETA CAE Systems China visited the GAC Research Institute in South China. The GAC Research Institute was established in 2006. It is the technical management department and R&D system hub of the GAC Group, responsible for the development of independent brand products such as the GAC Trumpchi and GAC Aion, as well as the planning, formulation and implementation of new technologies.

During the technical workshop, engineers from various departments of the GAC Research Institute, coming amongst other from CFD, NVH, and collision, collaborated with the technical team of BETA CAE Systems China who offered tailored insights to each department's specific needs. Participating engineers from the GAC Group provided feedback that highlighted the ANSA and META extensive functionality range and efficiency and offered valuable insights on their application in their daily working ways.

We at BETA CAE Systems will continue to provide cutting-edge technology and services to simulation users at GAC Research Institute with a deep passion for advancing simulation. We look forward to exploring further opportunities for collaboration in simulation applications after this successful interaction
